MAIN BENEFITS

- **Proactive Patient Management:** Access real-time data on hospitalizations and ER events to intervene early, enabling timely follow-ups and coordinated care to prevent complications.
- **Reduction in Readmissions:** Track readmissions and admissions to enhance follow-up care, helping you reduce readmission rates and improve patient outcomes.
- **Efficient Resource Allocation:** Utilize insights into top utilizers and high-risk patients to prioritize resources for those who need them most, effectively managing chronic conditions and minimizing unnecessary ER visits.
- **Improved Care Continuity:** Ensure tracking of discharged patients and follow-up appointments to enhance post-hospitalization care and achieve better long-term outcomes.
- **Data-Driven Decision Making:** Leverage utilization metrics and year-to-date trends to gain valuable insights into patient behavior, helping you adjust care strategies, identify high-risk populations, and allocate resources efficiently.
- **Provider Performance Monitoring:** Utilize rankings of top providers based on admissions and readmissions to foster collaboration between primary care offices and hospitals, enhancing care coordination.
- **Customizable Reporting and Visualizations:** Tailor insights and reporting options to suit your needs, switching between graphs, charts, and metrics for a comprehensive view.
- **Increased Patient Satisfaction:** Provide proper follow-up care, reduce readmissions, and effectively manage chronic conditions to achieve higher patient satisfaction and better outcomes.

KEY FEATURES

Provides Live Data on Hospitalizations and ER Events

Delivers real-time updates on current admissions and ER events for immediate care coordination.

Offers Utilization Metrics and Trends

Presents detailed utilization per thousand metrics and year-to-date trends, offering a clear picture of healthcare usage, including readmissions and resource allocation.

Includes Advanced Filtering Options

Segments data by population, region, provider, line of business, or health plan to tailor insights to specific needs.

Identifies Top Providers and High-Utilizer Patients

Highlights top providers and high-utilizer patients to focus on care management and engagement.

Tracks Post-Hospitalization Follow-Up:

Monitors discharged patients' follow-up appointments, compares scheduled vs. unscheduled follow-ups, and distinguishes between admissions and readmissions.

Supports Customizable Data Visualization:

Provides flexible data presentation options, including pie charts, line charts, numbers, or percentages.

Delivers a Live Census View

Displays a real-time snapshot of all inpatients, observation patients, ER visits, and scheduled referrals, complete with detailed patient views.

Monitors High Utilizer Patient Tracking

Tracks high-utilizer patients, their diagnoses, destination facilities, and hospital stay durations to identify trends in chronic conditions and frequent ER visits.

Take control of your patient population with the Virtu Hospitalization Analytics Module. Enhance care coordination, reduce readmissions, and streamline decision-making with real-time insights.
